

HIGH PONYTAIL TUTORIAL

By Kaleidoscope's Makeup Workshop Artist Kathryn Julian

TIP: Start with clean, detangled hair for easy to manage hair.

1. Begin by lightly misting the front area of the hairline with water or hairspray. Brush the hair toward the back of the head.
2. Next, start gathering the hair in one hand while continuing to brush the hair straight back.
3. When all of the hair is pulled straight back in your hand, use your other hand to spray hairspray (or apply gel) to the hair.
4. Using a fine tooth comb, smooth out the hair, gathering the hair into the holding hand.
5. When the desired smoothness is achieved, use a hair tie to secure the hair at the crown of the head. See images below for placement of the high ponytail.
6. To secure the ponytail, you may need to use more than one hair tie.
7. Once the ponytail is secured, go back with the fine tooth comb and more hair spray to smooth out stray hairs, bumps, or frizz.
8. Using bobby pins, secure any stubborn bumps or strays toward the base of the ponytail.
9. Spray the leftover hair in the ponytail with hairspray and brush out to smooth.

About Placement: A well-placed ponytail will accentuate and flatter your facial structure. To find the true crown of the head, draw an imaginary line from the corner of your mouth, along your cheekbone and over your ear to the back of the head.
